

# **Inherited Housing System in Kampung Kauman**

## **: Rescuing the Structure and Offering the Community Regeneration**

Retna Hidayah

Shigemura & Yamazaki Laboratory, Kobe University

### **Introduction**

The concept of sustainability, even though has not insufficiently defined, arises as one of the present challenges in either urban or rural development worldwide. Diverse specialists to make the definition of sustainable development clear have been conducting many works. The objective of this study is to introduce the practical of inherited housing system in traditional urban neighborhood by rescuing the structure of settlement and offering the community regeneration which have potentiality to promote the sustainable community in urban area.

### **Kampung Kauman at Yogyakarta city**

The first formation of Yogyakarta city is a walled palace with many quarters at the surrounding of the palace. These old quarters followed by the new ones that scattered around the city have formed the urban villages (*kampung*) which have been continuously growing, even though tends to be seen as irregular and unplanned. Since the *kampung* compound 60% of urban settlement where 80% urban population lived, it is enable the living tradition of *kampung* in utilizing the urban space influence the future of city.

Kampung Kauman is one of the old quarters where the muslim Royal officials and traditional paintings (*batik*) craftsmen ever lived. It grew into ordinary *kampung* since the Royal did not take any official role in the city. Some descendants of muslim Royal officials and batik craftsmen together with another inhabitants live there within 192.000-m<sup>2</sup> land and continuing the living tradition. They practice the inherited housing system which offering the advantages to rescuing the structure of settlement and community regeneration.

### **Rescuing the structure of settlement**

To continuing the *kampung* living tradition that can meet to the contemporary need the community rescuing the structure of settlement trough inherited housing system. They tend to let their family or another people to live together in their large original traditional house. It will fulfill the need for optimal urban land utilization for living space by densification of occupation rate through re-use housing practice. Also, the system offering opportunity for community regeneration and create the liveable community where the elderly, young people, and children living together and making interrelationship among them.

### **The Future Challenge**

The individual participation in the inherited housing system should be enhanced toward the communal participation in organizing whole structure of settlement to promote the sustainable community. A part should cooperatively arrange the whole in harmony.

# INHERITED HOUSING SYSTEM AT KAMPUNG KAUMAN YOGYAKARTA

The concept of sustainability, even though has not insufficiently defined, arises as one of the present challenges in either urban or rural development worldwide. Diverse specialists to make the definition of sustainable development clear have been conducting many works. The objective of this study is to introduce the practical of inherited housing system in traditional urban neighborhood by rescuing the structure of settlement and offering the community regeneration which have potentiality to promote the sustainable community in urban area.

The first formation of Yogyakarta city is a walled palace with many quarters at the surrounding of the palace. These old quarters followed by the new ones that scattered around the city have formed the urban villages (kampung) which have been continuously growing, even though tends to be seen as irregular and unplanned. Since the kampung compound 60% of urban settlement where 80% urban population lived, it is enable the living tradition of kampung in utilizing the urban space influence the future of city.

Kampung Kauman is one of the old quarters where the muslim Royal officials and traditional paintings (batik) craftsmen ever lived. It grew into ordinary kampung since the Royal did not take any official role in the city. Some descendants of muslim Royal officials and batik craftsmen together with another inhabitants live there within 192.000-m2 land and continuing the living tradition. They practice the inherited housing system which offering the advantages to rescuing the structure of settlement and community regeneration.

## densification of living space

## community regeneration

To continuing the kampung living tradition that can meet to the contemporary need the community rescuing the structure of settlement trough inherited housing system. They tend to let their family or another people to live together in their large original traditional house. It will fulfill the need for optimal urban land utilization for living space by densification of occupation rate through re-use housing practice. Also, the system offering opportunity for community regeneration and create the liveable community where the elderly, young people, and children living together and making interrelationship among them.

The individual participation in the inherited housing system should be enhanced toward the communal participation in organizing whole structure of settlement to promote the sustainable community. A part should cooperatively arrange the whole in harmony.

## RESCUING THE STRUCTURE OF SETTLEMENT AND OFFERING THE COMMUNITY REGENERATION

## re-use of existing housing
